Continuation of 5. does NOT place the application in condition for allowance because: although the applicant asserts that there is a distinction with a difference between the polymers of Madha and those in the instant case, applicant does not state what this difference is. Applicant's argument as to the point of novelty of this invention, i.e., the employment of two thickening agents has been considered, but is not persuasive. The claims require a composition comprising two thickening agents one of which is a non-cellulosic thickening agent. Note that thickening agents are known cosmetic additives/excipients and adding them to a composition is within the skill of the artisan and is therefore obvious, absent evidence to the contrary. The table provided on page 8 of the specification does not constitute the showing of unexpected results. The showing can be summarized as follows: the addition of a cellulosic co-thickening agent as one of the two co-thickening agents in the composition results in a less viscous composition than the composition comprising of only one thickening agent. Further, the composition comprising a non-cellulosic co-thickening agent as one of the two thickening agents results in the most viscous composition. The claims herein do not explicitly recite a limitation concerning the viscosity of the compositions herein. Note that this showing is not clear, nor convincing. Further the showing is not commensurate is scope with the claims herein.
